SUMMARY

Final-year Information Technology student with a solid foundation in Fullstack development (React.js, Node.js/NestJS) and RESTful API design. Experienced in building scalable architectures, handling client-server interactions, and managing databases (SQL/NoSQL). Highly motivated to write clean, maintainable code and proactively apply AI tools (LLMs, RAG, AI Agents) to optimize development workflows and enhance product features.

EDUCATION

Industrial University of Ho Chi Minh City <i>Bachelor of Information Systems — GPA: 3.43/4</i>	Sep. 2022 – Dec. 2026 (Expected) <i>Ho Chi Minh City, Vietnam</i>
• Achievements: Awarded Academic Scholarship (70%) twice based on high GPA performance • Relevant Coursework (Points): Web Application Development (10.0), Data Structures & Algorithms (9.0), Service-Oriented Programming (9.0)	

TECHNICAL STACKS

Frontend: HTML, CSS, JavaScript, React.js, Bootstrap, jQuery, PHP.
Backend : Node.js (Express, NestJS).
Databases & Caching : MongoDB, MySQL, PostgreSQL, Redis.
Messaging & Auth : RabbitMQ, Keycloak.
Concepts : RESTful APIs, HTTP, Client-Server Architecture, Authentication, Caching.
Tools : Git, GitHub, Postman, Chrome DevTools, Docker, GitHub Copilot, ChatGPT.

PROJECTS

Career Orientation	Backend — Frontend
• Designed and developed a full-stack career orientation platform using React.js and NestJS with a microservices architecture consisting of 5+ services, improving modularity and maintainability. • Built and integrated 20+ RESTful APIs for authentication, recommendation, booking, and user management, enabling seamless communication between frontend and backend systems. • Implemented inter-service communication using gRPC and TCP, reducing service response overhead and improving internal communication efficiency in distributed workflows. • Integrated RabbitMQ to support asynchronous processes (e.g., booking and payment), improving system responsiveness and reducing synchronous service dependency. • Implemented authentication and authorization with Keycloak and optimized token validation using Redis caching, reducing authentication response time by 40% and minimizing repeated validation overhead. • Developed real-time features using WebSocket for live notifications and interactive updates between users and services. • Managed MongoDB data and optimized query performance through indexing and caching strategies for frequently accessed resources. • Containerized services with Docker and integrated Cloudinary for scalable media storage and optimized image delivery.	

Electronics E-commerce Website Personal Project	View Repository
• Developed a server-side rendered (SSR) e-commerce web application using Node.js, Express.js, and EJS, supporting complete product browsing and purchasing workflows. • Built dynamic user interfaces with EJS, jQuery, Bootstrap, and AJAX to enhance user interaction and improve responsiveness. • Implemented authentication and authorization with JWT and Google OAuth 2.0, including role-based access control for admin and user systems. • Integrated real-time functionalities using Socket.io for user-admin chat and order status updates. • Developed backend services for payment processing (VNPay), email notifications, and database operations with MySQL.	

LANGUAGES

English: Intermediate (TOEIC 650 – Listening & Reading) — Vietnamese: Native
