https://www.linkedin.com/in/vothuonghoai/

District 12, Ho Chi Minh City

Skills

Testing: Manual Testing, Test Case Design, Bug Reporting, API Testing.

Tools: Postman, Jira, GitHub, Docker, Selenium.

Databases & Caching : MongoDB, MySQL, Qdrant, SQL Server.

Database: MySQL, SQL Server, MongoDB.

Others: GitHub Copilot, ChatGPT, Cursor, Claude.

Language

ENGLISH Able to read and write well, basic speaking ability

INTRODUCTION

Final-year Information Technology student pursuing a career in Software Testing (Manual Testing) and software quality assurance. Possess strong logical thinking, a proactive self-learning mindset, and the ability to quickly adapt to software development processes. Interested in applying AI tools to support testing activities, optimize workflows, and enhance user experience. Passionate about understanding products, identifying issues, and improving system quality from a real user perspective.

EDUCATION

Information Of Technology

2022 - 2026 (Expected)

Industrial University of Ho Chi Minh City

Bachelor of Information Systems

PROJECTS

Microservices E-commerce Platform **T08 - 2025 - T10 - 2025**

Link Project: https://github.com/Tiuquoai/EProject

- Performed manual testing for an e-commerce platform developed with Microservices architecture to ensure system stability across multiple services.
- Designed and executed test cases for 10+ RESTful APIs using Postman, covering authentication, product management, and order workflows.
- Applied Selenium for basic automated UI testing and validation of critical user workflows.
- Validated inter-service communication using gRPC and tested asynchronous workflows integrated with RabbitMQ.
- Supported deployment testing in Docker environments and verified media upload/display features integrated with Cloudinary.
- Reported bugs and collaborated with team members to improve system quality and user experience.

Learning Management System (LMS) **T01 - 2026 - T5 - 2026**

Link Project: https://github.com/Tiuquoai/QLHV_NEW_1

- Performed manual testing for a Client–Server system developed with ReactJS, PHP, and Python.
- Tested RESTful APIs using Postman and applied Selenium for basic automated UI testing.
- Validated JWT authentication/authorization workflows and verified real-time features using WebSocket.
- Tested AI-integrated student consultation features using RAG techniques to ensure accurate responses.
